Ideation Phase
Brainstorm & Idea Prioritization Template

Date	**31 January 2025**
Team ID	
Project Name	**Incident Lifecycle Automation in ServiceNow**
Maximum Marks	**4 Marks**

Step 1: Select the Problem Statement

Problem Statement

Incident management is an important IT service management process. When incidents are not recorded, classified, assigned, investigated, and resolved in a consistent way, support teams may experience delays, incomplete documentation, repeated troubleshooting, and limited visibility into progress. A structured process is needed to manage incidents throughout their lifecycle.

Project Idea

Incident Lifecycle Automation in ServiceNow uses the ServiceNow Incident Management capabilities to organize incident handling from creation and classification through assignment, investigation, resolution, and closure. It also uses related capabilities such as Knowledge Management, related change requests, parent–child incidents, resolution documentation, and SLA tracking where configured.

Objective

The objective is to demonstrate a structured incident lifecycle in ServiceNow, improve consistency in incident handling, support knowledge-based troubleshooting, route incidents to appropriate support groups, maintain resolution details, and make related records and applicable SLAs easier to track.

Step 2: Brainstorm, List and Group Ideas

The following ideas were considered for improving incident lifecycle management:

Idea	Description
1. Incident recording	Capture a clear incident description and relevant caller information.
2. Incident classification	Use category, subcategory, urgency, service, and configuration item (CI) fields where applicable.
3. Knowledge support	Use relevant Knowledge articles to assist troubleshooting and incident resolution.
4.Assignment & reassignment	Route incidents to the appropriate support group for investigation.
5. Change handling	Create or associate a change request when a change is required to resolve an incident.
6. Related incidents	Link related incidents through parent–child relationships when appropriate.
7. Resolution documentation	Record cause, workaround, work notes, and resolution details for future reference.
8. SLA tracking	Review applicable task SLAs and related records to monitor incident handling.

Step 3: Idea Prioritization

Ideas are prioritized according to their importance in the incident lifecycle, practical usefulness, and feasibility within ServiceNow.

Priority	Ideas	Reason

High	Incident recording and classification; assignment; Knowledge support; resolution documentation.	These are core activities needed to manage incidents consistently.
Medium	Related change requests; parent–child incident relationships; SLA and related-record tracking.	These support coordination, traceability, and monitoring where configured.
Future enhancement	Additional dashboards and advanced analytics.	These can extend reporting if they are not part of the current implementation.

Selected Idea

A ServiceNow-based incident lifecycle process that supports structured incident recording, classification, assignment, investigation, knowledge use, related change and incident records, resolution documentation, and SLA tracking.
